Presentations
Attendance required for all presentations

Com S/SE 409 & Com S 509, Fall, 2017
R. Lutz

Organization & Advice:
- **Class attendance for all presentations is required**
- Each team member must present.
- Each team will have 12 minutes + a few minutes for questions
- Please bring a laptop and any adapters or dongles you need, and test your presentation before class begins.
- Think of what you've done that distinguishes your project from others & focus on that.
- The goal of the project is to provide the specifications for a *new* product. To that end, be accurate in discussing the limits to your knowledge or specification. Knowing and openly acknowledging what the uncertainties are reduces project risk.
- The audience for the presentation is your fellow classmates, not Jinu and me, so make it intelligible and interesting to those on other projects.

What To Present:
- **1st slide: Give your project a name & list all the team members**
- **Presentations should include a portion of your prototype**
- **Presentations should include all team members with comparable responsibilities and speaking time**
- **No notes used by presenters unless you talk with me beforehand; no reading slides to us**
- Some topics that your team might include (no team will have time for all of these):
    - Brief description of the goals
    - Glossary/Terminology
    - Context Diagram
    - Key functional requirements
    - Constraints & assumptions
    - Use case diagram
    - Key nonfunctional requirements
    - Performance requirements' fit criteria
    - Failure scenarios
    - Nonfunctional requirements fit criteria
    - Describe how the team prioritized requirements
    - Data and interface requirements
    - Cost and schedule estimation (include your assumptions)
    - Software architecture for prototype
    - Open issues
    - (509) Soft goals
